

## Appendix 6

These directories contain the primary post-processing and visualisation scripts, and some of the required input files used for this thesis. The ordering of the scripts approximately represents the order to the workflow.

Input files for published seismic tomography models have not been included and must be obtained before running the scripts to generate seismic tomography (9.6.3-all). The input files for the CitcomS model are also not included and must be generated before running the .cfg script (9.6.1.1).

### IMPORTANT NOTE

If using these scripts:

Make sure that the paths are all correct in each script.

Make sure that the required directories exist (some of the scripts require an empty directory to be created before the script is executed).
