

Appendix 4

These directories contain figures showing modelled and observed tectonic subsidence curves for each well location in the Eromanga and Surat basins. Figures are included for both sets of model runs:

- Reference model ('RM') series of runs
- Subduction zone shifted east ('Slab23E') series of runs

These figures essentially combine the data from Appendix 2 and Appendix 3. See Appendix 1 for a Table of model runs and Appendix 2 for a list of well locations.

Figure key is shown below.
